

Left side

Messerschmitt Bf 109G

Right side

Messerschmitt Bf 109G

Dear customer,

The subject side panels have been assembled and ready for installation in a model cockpit.

Individual control elements are fixed by small screws to the inside structure of the panel and, if need be to modify the inside structure dimensions, the elements may be dismantled.

Where the dimensions of the side panel are convenient, a wire may be drawn out from individual elements and glued to the structure.

On the rear side of the panel, it is recommended to secure the nuts against release by a melt gun or by glue. As the case may be, an excess length of a screw may be shortened.

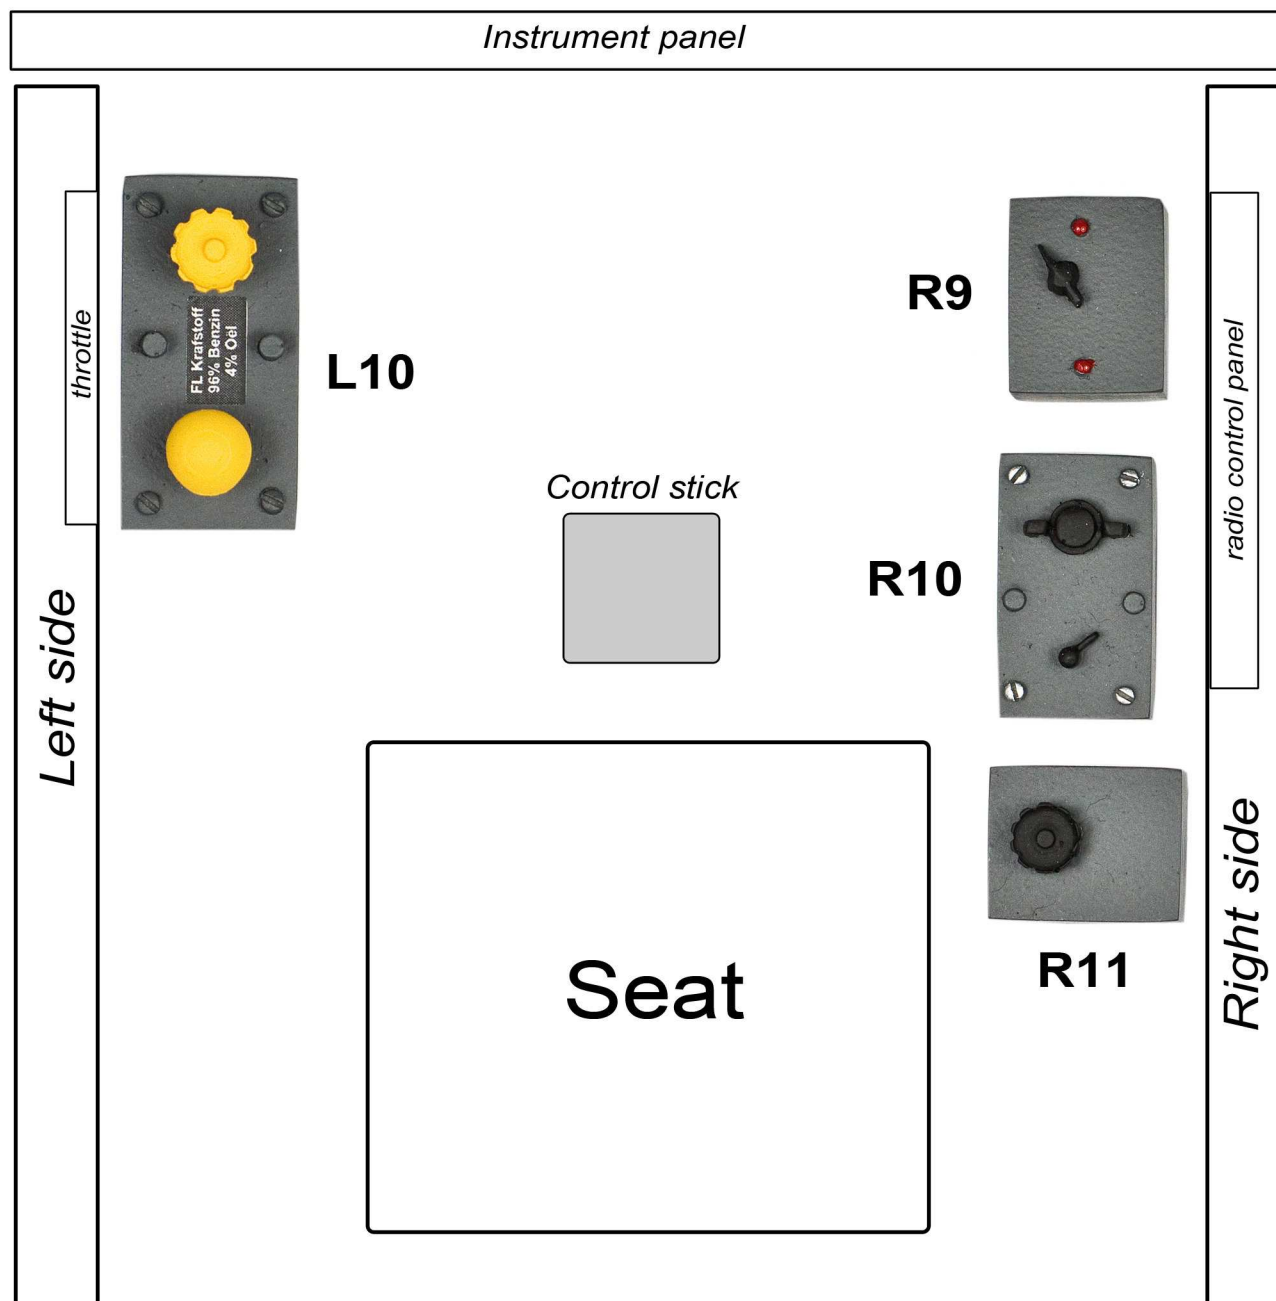

Glue the L5,L6,L9,(pin L2,L8) and R2,R8 parts by instant glue on the side panel.

The sheet with the stencils is a self-sticker. Stick the stencils on the side panels.

Thanking you for your interest in our products, we wish you many flight hours free of any accidents.

Yours Aerocockpit

Messerschmitt Bf 109G
